Introduction

Landis is a simple one page Landing/Under Construction WordPress Theme that allows you to keep your users informed while you are building a your amazing new website. This WordPress Theme will allow you to quickly and easily create a landing page on a your website project that tells the visitors what is going on and when the site will be launched.

WordPress Installation

There are few things you need to have and do.

- An access to your web server via FTP
- A text editor
- Your web browser of choice

1. Download WordPress

First thing you need to do is download the latest version of WordPress. Download the file and unzip it. Then using the FTP Manager, upload the files into your web host directory of your choice.

2. Create a MySQL Database

If you are using a hosting provider, you may already have a WordPress database

set up for you, or there may be an automated setup solution to do so. Check your hosting providers support pages or your control panel for clues about whether or not you will need to create one manually.

We use Cpanel to manage all of our accounts and MySQL Databases. To create a MySQL in Cpanel, you need to log in to your account and go to the MySQL Database Icon. Then click Add a New Database.

3. Run Install

With the new version of WordPress, you don't have to edit your config file anymore, simply type the URL of the directory where it was installed and enter your database connection details, database name, database username, database password, database host (99% chance you won't need to change this value).

If WordPress can't find the wp-config.php file, it will tell you and offer to try to create and edit the file itself. (You can also do this directly by loading wp-admin/setup-config.php in your web browser.) WordPress will ask you the database details and write them to a new wp-config.php file. If this works, you can go ahead with the installation; otherwise, go back and create, edit, and upload the wp-config.php file yourself.

Go to where you extracted the WordPress package, locate and rename the file wp-config-sample.php to wp-config.php, open it in a text editor and edit fields below

DB_NAME - The name of the database

DB_USER - The username you created

DB_PASSWORD - The password

DB_HOST - The hostname (usually localhost, 99% chance you won't need to change this value)

DB_CHARSET - The database character set, normally should not be changed

DB_COLLATE - The database collation should normally be left blank

...save this file.

Theme Installation

1. The Easy Installation

This method doesn't always work perfectly and we recommend the Traditional Install. If you really want to do install on the Easy way follow next steps...

1. After purchasing and downloading an Landis Theme from Themes Kingdom, in your blog administration panel navigate to Appearance > Add New Themes within the WordPress admin.
2. Choose the Upload option from the top of the page.
3. Select the .zip file of the downloaded Landis Theme (Landis_theme > WP > Landis.zip) and click Install Now.
4. Navigate to Appearance > Themes and activate the theme.
5. You're done!

2. The Traditional Install

There's a little more time and work involved installing a WordPress theme the traditional way but don't be scared. Please follow next steps...

1. Download and unzip the Landis Theme folder from Themes Kingdom, if you haven't already.
2. Next you will need an FTP program such as Total Commander, Transmit or Filezilla.

3. Login to your host server using the FTP software.
4. Unzip (Landis_theme > WP > Landis.zip) and upload the theme folder in to the /wp-content/themes/ directory.
5. Navigate to Appearance > Themes and activate the theme.
6. You're done!

04.

Landis

Setting up Your theme

In WordPress admin panel go to Landis Theme -> Theme Options.

In this section you can set up:

1. Logo
2. Favicon
3. Page Title
4. Page Content
5. Timer Text
6. Launch Date
